

ARTEINA Beveling tool

How to use it and recommendations

The functioning of our Beveling tool is quite simple, and it needs very little setting up.

The beveller contains two blades, which have two sides each (one of the sides bevels the plate, and the other burnishes it). Depending on what you want to do with your plate, you need to set the blades one way or another, by helping yourself with an *Allen key*. If you want to bevel both sides of the plate, you need to have both blades with the beveling side looking at the plate. In case you wish to just bevel the upper side (or the bottom one) of your plate, then you need to unscrew one of the blades, turn it upside down, and screw it again to the tool in the correct position.

The cutting side of the blades could damage your skin if not using it carefully, so please handle it with care.
